Kumar Shreyash

Software Developer

Delhi, India +91 7970406579 kumarshreyash2504@gmail.com Linkedin GitHub(KSShreyash)

EDUCATION

Vellore Institute of Technology **Aug 2023 – Jul 2027**
Bachelor of Technology — Computer Science CGPA: 8.79

EXPERIENCE

Yolex Labs Singapore (Remote)
Software Development Intern Jun 2026 – Oct 2026

- Developed AI agents for organizational workflow analysis and task automation with context-aware detection of operational bottlenecks, and worked with a distributed remote team to ship platform improvements, owning assigned development tasks from implementation through testing.
- Shipped new features like bulk résumé upload that parses CVs into structured candidate profiles for assessment invitations.
- Resolved a duplicate-record bug that created a new position instead of updating the existing one when navigating back from a generated brief.
- Built the interview-round configuration admin panel for **Candoor**, an anonymous interview platform, letting admins define and sequence interview rounds, and redesigned its UI/UX.

Samsung PRISM Bangalore (Remote)
Research Intern *(Samsung R&D Institute India – Bangalore, SRI-B)* Aug 2025 – May 2026

- Implemented C/C++ forward and backward propagation layers for deep learning models targeting resource-constrained embedded devices where standard ML frameworks are not viable.
- Validated numerical accuracy of model outputs and trained weights against TensorFlow reference implementations within defined precision benchmarks.
- Built a modular, reusable C++ class framework abstracting low-level operations into higher-level ML primitives, benchmarked for latency and code size against TensorFlow baselines.

Sangam Club, VIT Chennai Chennai, India
Technical Lead Apr 2024 – May 2026

- Built a React-Supabase Treasure Hunt application with real-time QR verification for **300**+ users and led a **15**+ member team in delivering technology-driven club events.

PROJECTS

AI Workspace Assistant *Next.js, FastAPI, Supabase, OpenAI, Microsoft Graph API*

- Developed an AI workspace assistant integrating Microsoft Graph APIs and LLM-powered analysis to extract tasks, deadlines, commitments, and meeting requests from Outlook emails and Teams chats.
- Engineered AI-generated contact cards that summarize conversation history, highlight key details to remember, prioritize follow-ups, and recommend upcoming tasks; integrated with Microsoft Graph to suggest and schedule Teams meetings.

Problem Tracking Agent *Python, FastAPI, MongoDB, Google OAuth, JavaScript, HTML, CSS*

- Developed a full-stack AI-powered organizational problem tracking platform where a GPT-4o agent conducts adaptive natural language interviews with employees, dynamically adjusts questions based on previous responses, and identifies workflow bottlenecks through contextual reasoning and root-cause analysis.
- Engineered a FastAPI and MongoDB backend to analyze employee feedback, generate AI-driven reports and actionable insights, and integrate Google OAuth 2.0, Google Calendar scheduling, Whisper speech-to-text, and role-based manager dashboards.

SKILLS

Languages: C, C++, Java, Python
Frontend: React, HTML, CSS, JavaScript
Backend: SQL, PostgreSQL, Supabase, MongoDB, REST APIs, FastAPI
Tools & Platforms: Git, GitHub, VS Code, Claude Code
Concepts: Data Structures & Algorithms, Computer Networks, Operating Systems, Machine Learning, Object-Oriented Programming, AI Agents
